### **LaserSharp FlexPak Services, LLC Offers Laser Solution to Create a Peel and Reclose Application**

VADNAIS HEIGHTS, MN, FEBRUARY 21, 2013 - LaserSharp FlexPak Services offers a laser scoring process to create a peel and reclose application for the flexible packaging industry. Peel and reclose applications enable packages to be easily opened and closed, while maintaining the integrity of its contents. The peel and reclose application is often used to preserve perishable food items such as produce, cheese, and cookies, and other products like cleansing wipes.

A pressure sensitive adhesive label, combined with our LaserSharp® technology, is used to create an easy open package. The laser scored pattern is not limited to any shape or size, allowing LaserSharp FlexPak Services to create a specific pattern to meet your packaging needs. This process is suitable for a wide variety of film structures and packaging types, including trays, stand up pouches, and pillow pouches. For convenience purposes, an easy open pull tab can also be added to the package.

Laser technology is an efficient and accurate method for processing flexible packaging material. There are several advantages to using laser technology as a means to create a peel and reclose application. The advantages include consistent score depths resulting in a reliable and convenient package, and the accurate placement of each laser process. Laser processing is a noncontact method guaranteeing finished material free of processing fragments and residue.

Peel and reclose applications are a growing feature in the flexible packaging industry. Take advantage of this new laser process at LaserSharp FlexPak Services and create more unique and top quality packages for your customer.

### **About FlexPak Services**

LaserSharp FlexPak Services, LLC specializes in contract laser processing services for the flexible packaging industry. FlexPak works closely with its customers to develop innovative laser solutions for the design, testing, and production of easy open and breathable packages. LaserSharp® systems offer noncontact processing, resulting in precise and controlled scoring and perforating depths at high production speeds to increase product shelf life and consumer satisfaction.
